

1/4 INCH ELECTRIC

CORDLESS DRILLS

You Are No Longer "Chained" To An Outlet!

With the World's First CORDLESS Drill, you can drill holes miles from any conventional power source. On farm land, in a boat, at a vacation cabin. Up on a ladder, out on the water, straddling your roof . . . it's ready to go whenever and wherever you are! AND, this Drill is completely SHOCKPROOF, even if you stand in water. It's very quiet — hums like a bee, and works with the same efficiency; and the motor cannot be overloaded. For well over 20 years the power tool industry has been trying to develop a completely PORTABLE Drill . . . NOW IT'S HERE!

Black & Decker®

This is the **WORLD'S FIRST** **1/4" CORDLESS ELECTRIC DRILL**

The announcement of this amazing new tool has captured the imagination of Americans everywhere. From the flood of questions received by Black & Decker, the following were most often asked —

JUST HOW DOES IT WORK? The 1/4" Cordless Electric Drill has a self-contained energy source which combines a series of power cells with a highly efficient motor radically different from other power tools.

ARE THE CONSTRUCTION FEATURES REALLY UNIQUE? Inside and out, this beautifully designed and engineered tool is totally new and different. It's protected against dust and dirt. It's shockproof. It's amazingly quiet, superbly balanced for one-hand operation. It weighs only *four* pounds.

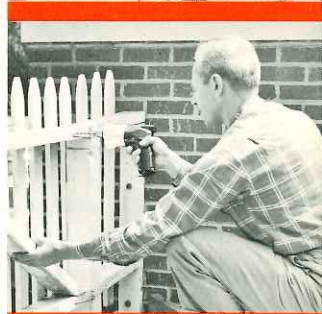

HOW MANY HOLES WILL IT DRILL PER CHARGE? Take, for example, in wood — in 3/4" fir, the Black & Decker CORDLESS will drill 300 1/8"-holes, or 200 1/4"-holes, or 75 1/2"-holes before its power cells need recharging. And the power cells are good for 400 charges before needing replacement.

EXPLAIN WHAT IS MEANT BY CHARGING? The Power Pack (power cells in the Drill) is charged by a Black & Decker Power Pack Charger which is connected to an electrical source — and will retail for \$9.95.

WHAT MATERIALS WILL IT DRILL? The 1/4" Cordless Electric Drill will handle wood, plastics, steel, aluminum, compositions — and many other materials within its rated capacity, depending, of course, upon the bit used.

WHO WOULD BE MOST LIKELY TO USE IT? Anyone who is away from a regular power source, and who has a drilling job to do within the rated capacity of the tool — as well as all those who dislike being chained to a length of electric cord.

The CORDLESS Drill is built with the same care and accuracy as a fine watch . . . The MOTOR is extremely quiet, and has an entirely different "feel" in operation. HOUSINGS do not require the conventional air openings and therefore practically eliminate the chance of dirt entering the mechanism. The TRIGGER SWITCH operates with a very "soft" pull — turns "OFF" instantly when released. BEARINGS, GEARS, CASTINGS and all component parts of the CORDLESS Drill have been designed and built to new, highest standards of quality. The result is an extremely smooth and efficient flow of power to the chuck.

Catalog No. C-600 1/4" CORDLESS ELECTRIC DRILL--\$49.95

(Includes Power Pack, chuck key mounted on handle, expanded polystyrene case, instructions)

**Catalog No. C-601 1/4" CORDLESS ELECTRIC DRILL
with Power Pack CHARGER-----\$59.90**

(Includes Power Pack, chuck key mounted on handle, expanded polystyrene case, instructions)

Catalog No. C-6000 Power-Pack CHARGER-----\$ 9.95

(Note: Power-Pack can be recharged a minimum of 400 times and is covered under the standard Black & Decker guarantee of quality. Replacement Power-Pack, No. 50435, will be available from all 51 B&D Service Branches.)

The Cordless Drill has a 1/4" bit shank capacity, a no-load speed of 1,000 M., and weighs only 4 lbs. Extra precision needle bearings. Ball thrust bearing on chuck spindle.
